

# Version Control System

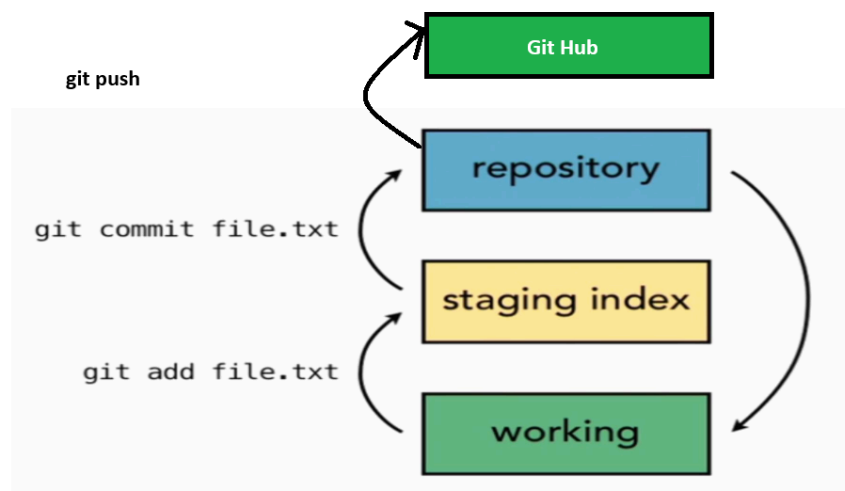

## Git and Github

- it is a Distributed Version Control System(VCS).
- Tracks the changes in files and directories over time
- Helps to manage source code for software development

Git Terminology

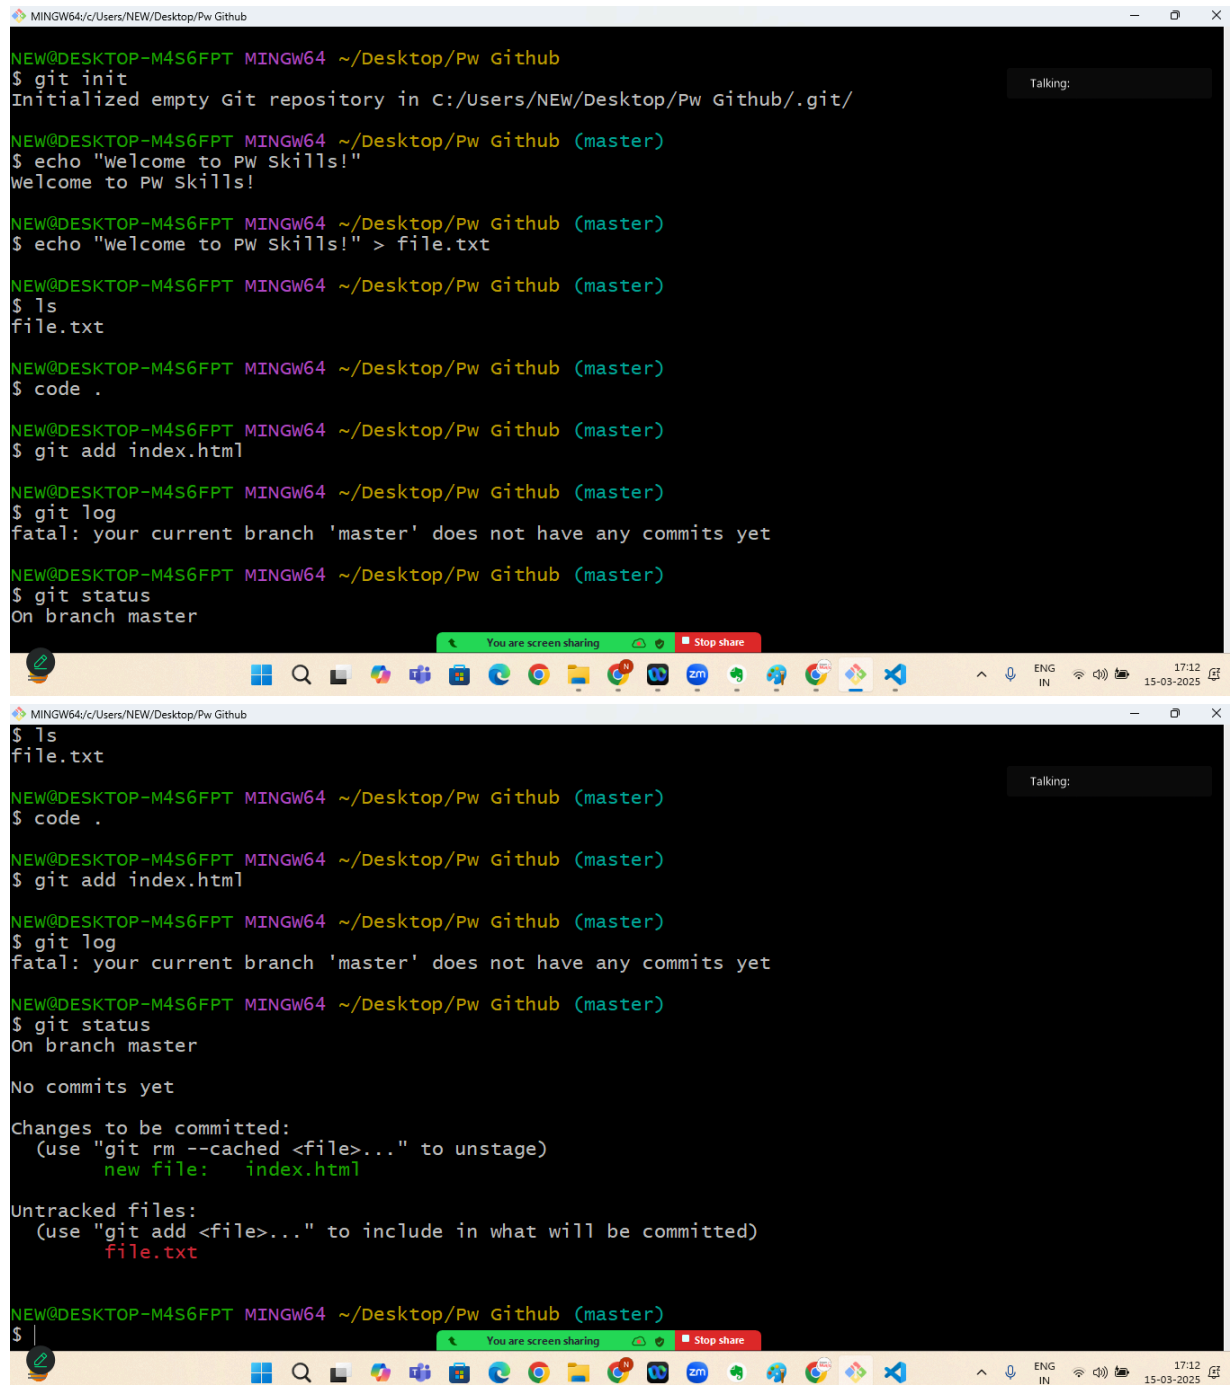

Repository: A Space Where Code is Stored (Mainly Open Source Code)

commits: every commits creates a snapshot of a given file or directory that we can compare at any time

1. **Download the GitBash From :** <https://git-scm.com/downloads>
2. login to the git hub and create the account note down username,password and email for future reference
3. do the global configuration
  - a. check the list of global users
    - i. **git config --global --list**
  - b. if the username and email is not coming you can set this up using below commands
    - i. **git config --global user.name "Your Username"**
    - ii. **git config --global user.email "YourEmail@gmail.com"**
4. create folder in your local machine:

5. open the Git Bash from the same Folder
  6. initialize the git repository:
    - **git init**
  7. you will see hidden folder **.git** in the folder
  8. create one file named:
    - a. **file.txt**
  9. Add the file to the tagging:
    - a. **git add <filename>**
  10. Add all the files to tagging:
    - a. **git add .**
  11. check the status of git using
    - a. **git status**
  12. do the commit to get the files ready for upload
    - a. **git commit -m "your message"**
  13. check the logs for staging
    - a. **git log** (full detailed logs will be printed)
    - b. **git log --oneline** (one line log will be printed)
  14. create another file and add it to the tagging
    - a. **git add <another file name>**
- check the status again
12. you can remove the file from tagging using
    - a. **git rm --cached <filename>**
- check the screen shots**

```
MINGW64/c/Users/NEW/Desktop/Pw Github
NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github
$ git init
Initialized empty Git repository in c:/Users/NEW/Desktop/Pw Github/.git/

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ echo "Welcome to PW Skills!"
Welcome to PW Skills!

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ echo "Welcome to PW Skills!" > file.txt

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ ls
file.txt

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ code .

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git add index.html

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git log
fatal: your current branch 'master' does not have any commits yet

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git status
On branch master

$ ls
file.txt

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ code .

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git add index.html

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git log
fatal: your current branch 'master' does not have any commits yet

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$ git status
On branch master

No commits yet

changes to be committed:
  (use "git rm --cached <file>..." to unstage)
    new file:   index.html

Untracked files:
  (use "git add <file>..." to include in what will be committed)
    file.txt

NEW@DESKTOP-M4S6FPT MINGW64 ~/Desktop/Pw Github (master)
$
```

## Master:

- It is a default branch.
- It is used by CI tools for build and deployment.
- It is followed by the other repositories.

## Branch:

- It is a light weight working copy.
- It has a staging area.

- It works without impacting the master branch.

#### **Head:**

- It is a pointer to the latest commit of the working branch.
- It is present on every repository.
- It will point to the latest commit during branch switch.

#### **Remote Repo:**

- It is a git repository on a network outside the local machine.
- It can have more than one remote repositories pointing from the local repository.
- It can be managed and referenced with short names.

#### **Push:**

- It pushes changes from the local to the remote repository.
- It is performed after committing the changes to the local repository.
- It syncs the changes with the local and remote repository.

#### **GIT DIFFERENCE COMMAND**

- `git diff <firstcommit> <second commit>`

#### **CREATING A BRANCH**

##### **1. to get the available branches**

- a. `git branch`

##### **2. to create a new branch**

- a. `git branch <name of the branch>`

##### **3. to switch to a particular branch**

- a. `git checkout <name of the branch you want to switch>`

#### **MERGING**

##### **1. you can merge existing branch with the master branch**

- a. `git merge <NAME_OF_THE_BRANCH_TO_MERGER>`
- b. **SAVE IT**

##### **2. check the files using**

- `ls`
